stackoverflow careers

<http://careers.stackoverflow.com/zeflasher>

I got hooked by technology when I got my first beloved Amstrad CPC 6128 at the age of 6. I have discovered on this one the love of programming things, back then developing on this beast in Basic. I remember also using some hexa editors to be invincible or have more bullets or ... while playing one of those many games I wish studios would still release.

That was the beginning of my passion for development... And 27 years later I still love developing. I love solving problems thrown at me, I like being challenged...

That is why I usually work on personal projects after working hours to try new technologies and create new (useful?) tools. And being a developer means constantly learning... How fun is this, you never get bored :)

I have used and am still using the knowledge the community is providing. As a thanks, I am participating in / owning several Open Source projects in different technologies.

What may be of an interest to you

Use to target specific job offers... So nothing to read here as you are downloading it from my blog.
